Subject: Microsoft Settlement

The remedies in the Proposed Final Judgment specifically protect companies in commerce -- organizations in business for profit. On the surface, that makes sense because Microsoft was found guilty of monopolistic activities against "competing" commercial software vendors like Netscape, and other commercial vendors -- computer vendors like Compaq, for example. The Department of Justice is used to working in this kind of economic world, and has done a fair job of crafting a remedy that will rein in Microsoft without causing undue harm to the rest of the commercial portion of the industry. But Microsoft's greatest single threat on the operating system front comes from Linux -- a non-commercial product -- and it faces a growing threat on the applications front from Open Source and freeware applications.

The biggest competitor to Microsoft Internet Information Server is Apache, which comes from the Apache Foundation, a not-for-profit. Apache practically rules the Net, along with Sendmail, and Perl, both of which also come from non-profits. Yet not-for-profit organizations have no rights at all under the proposed settlement. It is as though they don't even exist.

Section III(J)(2) contains some very strong language against not-for-profits. Specifically, the language says that it need not describe nor license API, Documentation, or Communications Protocols affecting authentication and authorization to companies that don't meet Microsoft's criteria as a business: "... (c) meets reasonable, objective standards established by Microsoft for certifying the authenticity and viability of its business, ..."

So much for SAMBA and other Open Source projects that use Microsoft calls. The settlement gives Microsoft the right to effectively kill these products.

Section III(D) takes this disturbing trend even further. It deals with disclosure of information regarding the APIs for incorporating non-Microsoft "middleware." In this section, Microsoft discloses to Independent Software Vendors (ISVs), Independent Hardware Vendors (IHVs), Internet Access Providers (IAPs), Internet Content Providers (ICPs), and Original Equipment Manufacturers (OEMs) the information needed to inter-operate with Windows at this level. Yet, when we look in the footnotes at the legal definitions for these outfits, we find the definitions specify commercial concerns only.

But wait, there's more! Under this deal, the government is shut out, too. NASA, the national laboratories, the military, the National Institute of Standards and Technology -- even the Department of Justice itself -- have no rights. It is a good thing Afghanistan is such a low-tech adversary and that B-52s don't run Windows.

I know, I know. The government buys commercial software and uses contractors who make profits. Open Source software is sold for profit by outfits like Red Hat. It is easy to argue that I am being a bit shrill here. But I know the way Microsoft thinks. They probably saw this one coming months ago and have been falling all over themselves hoping to get it through. If this language gets through, MICROSOFT WILL FIND A WAY TO TAKE ADVANTAGE OF IT.
